Test instruments and remarks

- * All test data is referenced to 25°C ambient.
- * L test by CHROMA 3302 meter or equivalent.
- * DCR test by Tonghui TH2516B meter or equivalent.
- * CHROMA 3302 and 1320 meter for IDC.
- * Isat: DC current (A) that will cause L0 to drop approximately 30%.
- * Irms: DC current (A) that will cause an temperature rise \triangle T approximate to 40° C.
- * The rated current as listed is either the saturation current or the heating current depending on which value is lower.
- * Operating temperature: -40° C to $+125^{\circ}$ C (Including self-heating)
- * The part temperature (ambient + temp rise) should not exceed 125°C under worse case operating conditions. Circuit design, component placement, PCB trace size and thickness, airflow and other cooling provision all affect the part temperature. Part temperature should be verified in the end application.
